

ASHCOURT ROLLER COMPACTED CONCRETE MIX CONSTITUENTS

GENERAL INFORMATION – ASHCOURT ROLLER COMPACTED CONCRETE

ASHCOURT ROLLER COMPACTED CONCRETE is designed as an alternative to asphalt roads using a concrete mix design and a paver.

The main components of which are as follows:

- Cement CEM I, or combinations with GGBS as per BS 8500-2.
- Coarse Aggregates – in accordance with BS EN12620 - 2002.
- Fine Aggregates – in accordance with BS EN12620 - 2002.
- Admixtures – For Curing – in accordance with BS EN934.

Typical Compressive Strengths

- Strengths of 40 - 50N/mm² are typically achieved within 7 days.

Please note the above strengths are for illustration purposes and are dependant on weather, including ambient temperatures and general workmanship. Full and thorough curing must be applied immediately after placing.

Ashcourt Roller Compacted Concrete is a high-quality concrete product, which is designed, produced, transported, and supplied in accordance with our ISO 9001. Accredited quality scheme (QSRMC) and in accordance with the relevant parts of BS8500 Part 2 and BS EN206 Part 1.

Please contact your local sales representative or sales office for any further information or assistance.
